

INNO2-IO-4000 SERIES

INNO2-IO-4431 RTU is a stand-alone data acquisition and control unit that allows users to remotely control the integrated machine while providing accurate, fast, and reliable data.

Features:

- Efficient and Secured RTU Protocol
- Supports both IoT System and DTU systems remotely
- Interchangeable between the Master Mode and Slave Mode
- Supports GPS Positioning
- Supports the use of MQTT Protocol
- Minimum network bandwidth consumption
- Free Configuration Management Software
- 2-year warranty

Applications Include:

- Air quality monitoring
- Environmental monitoring system
- Real-time acquisition of the weather
- Water quality monitoring

Protecting People, Assets and The Environment
